

Visiting the Zoo's Small Mammal House

National Zoo Social Narrative: Small Mammal House

Smithsonian
National Zoological Park
Conservation Biology Institute

There are many animals to visit at the Zoo.
Today, I am going to visit the Small Mammal House.

I know I have arrived at the Small Mammal House when I see an anteater statue and three doorways with a sign that says

Small Mammal House.

I may touch the anteater statue if the weather is not too hot.
I will not find an anteater inside the Small Mammal House.

I may see signs that tell me how to be safe when visiting the Small Mammal House. I will be safe and the animals will be safe, too.

When I go inside, I may smell a different scent.
I may see different kinds of **exhibits**. Inside, all of the animals are behind glass. I may see other people looking at the animals.

I may see a large sign with an elephant on it.
This is a special exhibit that moves to different parts of the Zoo.

I may see an exhibit on the walls that shows animal x-rays called **radiographs**. I may see some skulls, too.

I may see photographs of the animals living in the building.

Some exhibits are dark. These nocturnal exhibits are for animals that are active at night.

I may see an exhibit that has tunnels and chambers.
The naked mole-rats and Damaraland mole-rats live here.

Von der Decken's Hornbill

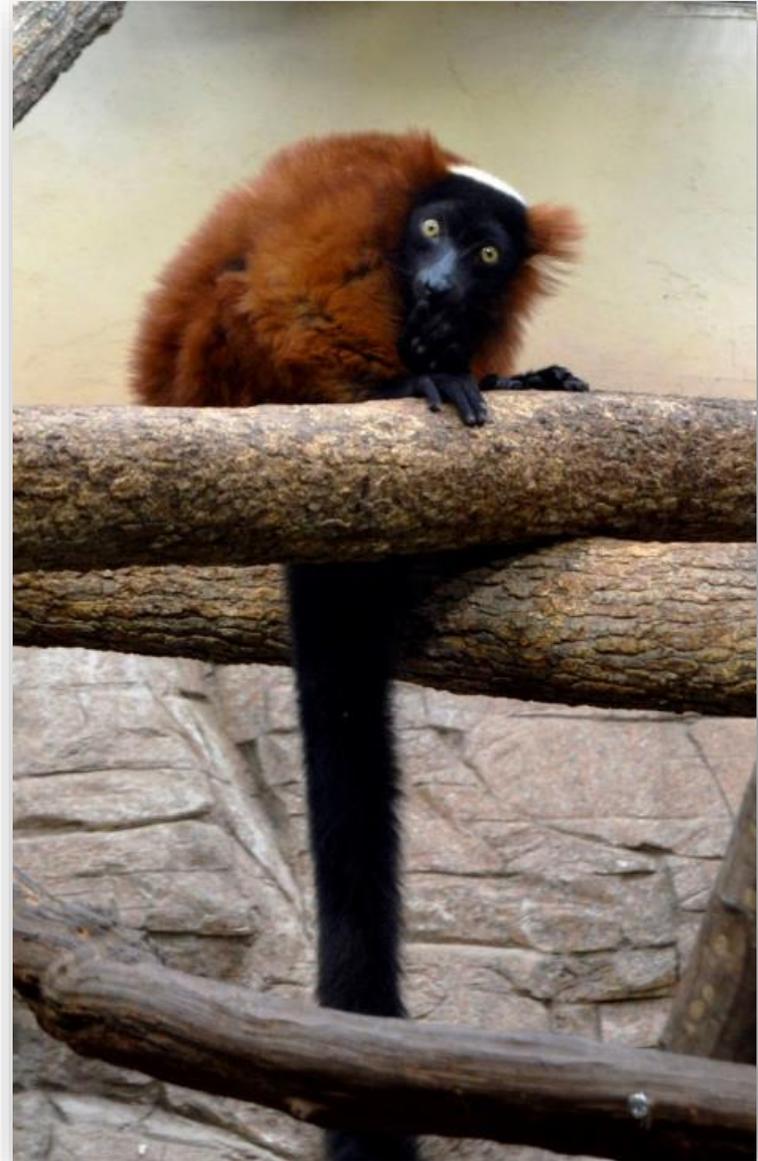

Meerkat

Some exhibits have birds, which are not mammals.
Some exhibits have different animals in the same space.
These are called **mixed-species** exhibits.

I may see some animals moving quickly around their exhibits, like the monkeys and armadillos.

I may hear some animals making loud noises like the howler monkeys and red-ruffed lemurs.

I may see some of the animals sleeping like these fennec foxes.

I may see animals living in groups like the degus above.

Some of the exhibits may be empty.
I may see signs that explain why they are empty.

The keepers add toys that keep the animals busy and help them exercise. The degu is having fun with his wheel. A banded mongoose is hiding in a bag. I can look for its exhibit.

I may see special boxes in some of the exhibits. The left box is called a **nest box**. The animals can go inside to rest when they want to. The right box is a training **crate**. The keepers train the animals to go into the crate. This is helpful if the animals need to be moved from one place to another.

I may see a volunteer in a red shirt. The volunteer can tell me more about the animals and may have objects for me to touch. If they tell me it's okay, I can touch the objects if I want to.

I may see a keeper give a talk about the animals.

I may see some of the animals up-close, like these naked mole-rats.

The keeper will tell me how to be safe around the animals.

I may see a chain barrier that lets me know not to go across it.

I may see a big exit sign that lets me know that I will be leaving the building.

Outside, I may see a pathway that leads me to an area behind the Small Mammal House.

Along the path, I may see some large mammals, like the Przewalski's horses.

Even though these horses aren't small, the Small Mammal House keepers take care of them.

If I keep going along the path,
I may see an area to sit and take a rest. I may see a pond, too.

I may see outdoor exhibits with different animals. In the winter, all of the animals are inside of the building to keep warm.

Next to the Small Mammal House, I may see a cactus garden.
I may see spines on some of the plants.
It is a nice, quiet area to visit.

The Small Mammal House
is full of many different
and exciting animals!

I may see more small
mammals in other exhibits
around the Zoo.
