

# MEMBERSHIP DISCOUNTING VIA PROMOTION CODE

## DOCUMENTATION

## Overview

This custom plug-in allows a customer to receive a discounted membership via a promotion code. When the customer submits a valid promo code and adds a membership to the cart, the plug-in updates the membership amount to the discounted amount as set in the system table LTR\_TNEWCustom\_Memb\_Discount.

## Designs

**Price BEFORE promo code is applied**

### Become A Member Today!

I would like to join at the following level  @ \$100

- Benefits for one named individuals
- Additional benefits info here

Membership Promo Code

**Price AFTER promo code is applied**

### Shopping Cart

Your cart contains items which will expire in 20 minutes

Description			Total
Individual Membership	\$85.00	1	\$85.00 <a href="#">delete</a>
Total:			\$85.00
<b>Amount Due:</b>			<b>\$85.00</b>

## Transaction Path

- The web user navigates to the standard TNEW Membership page.
- The web user enters a valid membership promo code within the standard TNEW interface.
- The web user adds the membership to the cart.
- If the promo code is intended to discount the membership, the plug-in will update the carted membership item to the discounted price. (Standard content structures in TNEW can be used to message the discounting appropriately on this screen.)
- The cart contents are displayed at which point the web user may either continue shopping or begin the checkout process.
- If a promotion code is added AFTER the contribution is added to the cart, a final check will be done UPON checkout to apply any deserved discounts based on promo code.

## Setup Requirements

1. All contribution types in the system table **LTR\_TNEW\_Contrib\_Type** that are to be discounted
  - must go to a fund and not an on-account payment method
  - must set up as a single amount and not a range
  - must be set-up as editable (editable check-box should be set to Y)
  - the membership level column must but filled out with the proper membership level.
  
2. In membership setup, if a membership level that is to be available for discounting, the level must have the start amount set to the lowest possible discounted amount for that level.
  
3. To toggle the plug-in on or off, go to system table **LTR\_TNEWCUSTOM\_WEB\_DEFAULTS** and set entry **membership\_discount\_is\_enabled** to either **Y** (to enable) or **N** (to disable).

## System Tables

### LTR\_TNEWCustom\_Memb\_Discount

Column	Comments
<b>Organization</b>	Set to the organization that the TNEW Site is using.
<b>Contrib Type</b>	A dropdown list of the values from the Cart Alias field in the system table LTR_TNEW_CONTRIB_TYPE. If the Cart Alias field is blank, the value from the Name field will display.
<b>Memb Level</b>	The Membership Level affected. Used by this plug-in only if no membership level is specified for the Contrib Type above.

Column	Comments
<b>Promo Code</b>	The valid promo code for this particular discount.
<b>Discounted Amount</b>	The actual amount the membership is to be discounted to. Example: If the normal membership amount is \$100 and we are offering a 10% discount, then 90 is the amount placed in this column.
<b>Start Dt</b>	<p>If a particular membership level is to have a different discount during a limited date range than the normal discount, the start date of the range is placed here.</p> <p>Note: The date configuration for a particular membership level must not overlap the dates of another configuration row for the same membership level and promo code.</p>
<b>End Dt</b>	<p>If a particular membership level is to have a different discount during a limited date range than the normal discount, the end date of the range is placed here.</p> <p>Note: The date configuration for a particular membership level must not overlap the dates of another configuration row for the same membership level and promo code.</p>
